# INTRODUCTION:

- Streaming: The technology of transmitting audio and video files in a continuous flow over a wired or wireless internet connection.
- It refers to any media content-live or recorded delivered to computer and mobile device via internet and played back in real-time.
- Music, video and other types of media files are prearranged and transmitted in sequential packets of data so they can be streamed instantaneously
- Social media platforms and others broadcast everything from celebrity events, promotions and live streaming to streaming between users. You can live stream on any compatible smartphone, tablet, TV, computer or gaming console with a relatively fast internet connection

# Problem Statement:

- Nowadays streaming platforms is been widely popular among people. But subscribing to every service could be very stressful, and a waste of money.
- But what to do when you want to catch all the latest and trending shows which are available on the different streaming platforms.
- Don't have money to subscribe to each service. Here our platform Stream comes into, here you can watch all the trending tv shows and movies from almost all the streaming services out there with free of cost.

# OBJECTIVES:

- ✓ To build an User friendly online streaming website.
- ✓ To provide entertainment platform for source TV shows, movies, serials, and etc.
- ✓ Providing a streaming websites which totally free of cost which has free subscription.
- ✓ To save money of the user from purchasing cables monthly fees and extra subscription charges .
- ✓ The user can register & create a account through Email and can login through the credential's.
- ✓ To let the user have a login user id and password to secure their account.

# SCOPE:

- Online video streaming.
- Cinema intro
- Recommendation system
- Free of cost streaming services
- Child restriction system

# Literature Survey:

- Video streaming has become more and more popular business video streaming applications such as YouTube accounting for a large quantity of Internet traffic. Using the cloud, user can stream any video from any video provider service to social network services. In this paper, I surveyed some completely different video streaming concept and technique to enhance the quality of videos.

Keywords:

Scalable Video Coding, Adaptive Video Streaming, Mobile Networks, Social Video Sharing, Cloud Computing

1. The Netflix Effect: Teens, Binge Watching, and On-Demand Digital Media Trends

- **Video manager:** This module allows subscriber to access videos contents.
- **My Channel:** In this module the visitor will have their own profile created by getting register them and can also analyse their profile.
- **Subscription:** In this module user can subscribe for live broadcasting by making payment. After confirmation of the payment the user can watch and record videos. The subscribed member can download the videos by clicking download button.
- **Comments and likes:** The registered user can post their comments and like the uploaded videos.

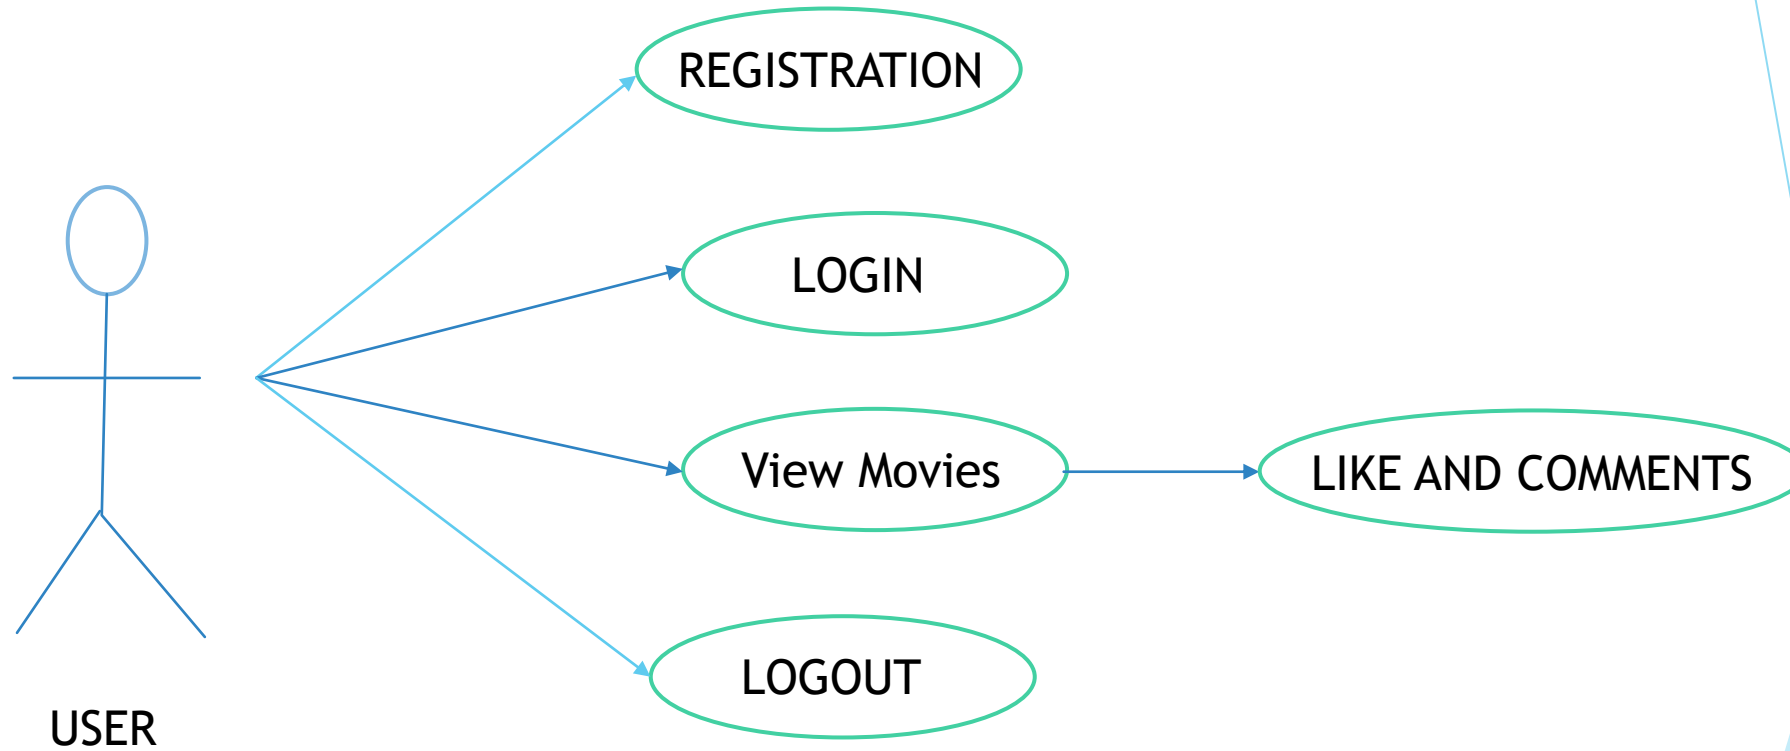

# PROJECT OUTCOMES:

- User can register and login themselves
- The user can watch the movies and content media as per interest
- Media contains the varieties of movies, devotional, cartoons, series, inspirational video
- The user will have recommendation updates as per their interest according to their watch history
- Watch movies, and media contents
- The User can also submit their grievance and feedbacks

**BLOCK DIAGRAM:**

# Use Case Diagram:

# TECHNOLGY STACK:

- HTML
- Node JS
- CSS
- Jsx
- REACT
- Media server cloudinary
- Database Mongo-DB

## SUGGESTION IN REVIEW-1:

- 1.To Generate a Email or Mobile number verification via OTP
- 2.To Add different categories of movies contents.

# RESULTS AND DISCUSSION:

**Enjoy on your Browser.**

Watch on Browser,  
Chromecast, Safari, and  
more.
