# 1. Introduction

## ❖ Problem Identified :

- We all are busy in our day to day lives and sometimes it is difficult to manage both work and home simultaneously.
- Now-a-days it's difficult to find a trustworthy person for our loved ones.

## ❖ Solution Proposed :

- Here we are introducing WeCare, Our app for sharing your responsibilities hand in hand.
- We have trained, kind, humble and qualified companions who will help you by staying beside you.

## 2. Objectives

1. To serve people by sharing their responsibilities.
2. To ensure adequate qualitative care to people.
3. To provide quality service at an affordable price.
4. To provide employment in the care sector.

### **3. Scope**

1. Bridging gap between who need care and who serves care.
2. Aiming to provide quality services at affordable prices.
3. Instant booking with desired services.
4. To provide employment for house workers.
5. To bring this service all over India.

## 4. Literature Survey

- Family caregivers are a vital part of society. They are important to their loved one(s), for the healthcare system, and to the economy. They give up personal time and resources to care for someone else who is in need.
- The Internet of Things is a new reality that is completely changing our everyday life, and promises to revolutionize modern healthcare by enabling a more personalized, preventive and collaborative form of care.
- While a wide range of family caregiver apps are now available across the mHealth landscape, most apps offer limited functionality. Therefore, there is a need for multi-functionality app to avoid the inherent challenges that caregivers may experience.

# 5. Proposed System

## 1. User Friendly :

- Simple and interactive user interface.
- All services provided at one place.

## 2. Categories :

- Select Services according to your requirements.

## 3. Personalization:

- We provide customizable services.

## 4. Location based Search:

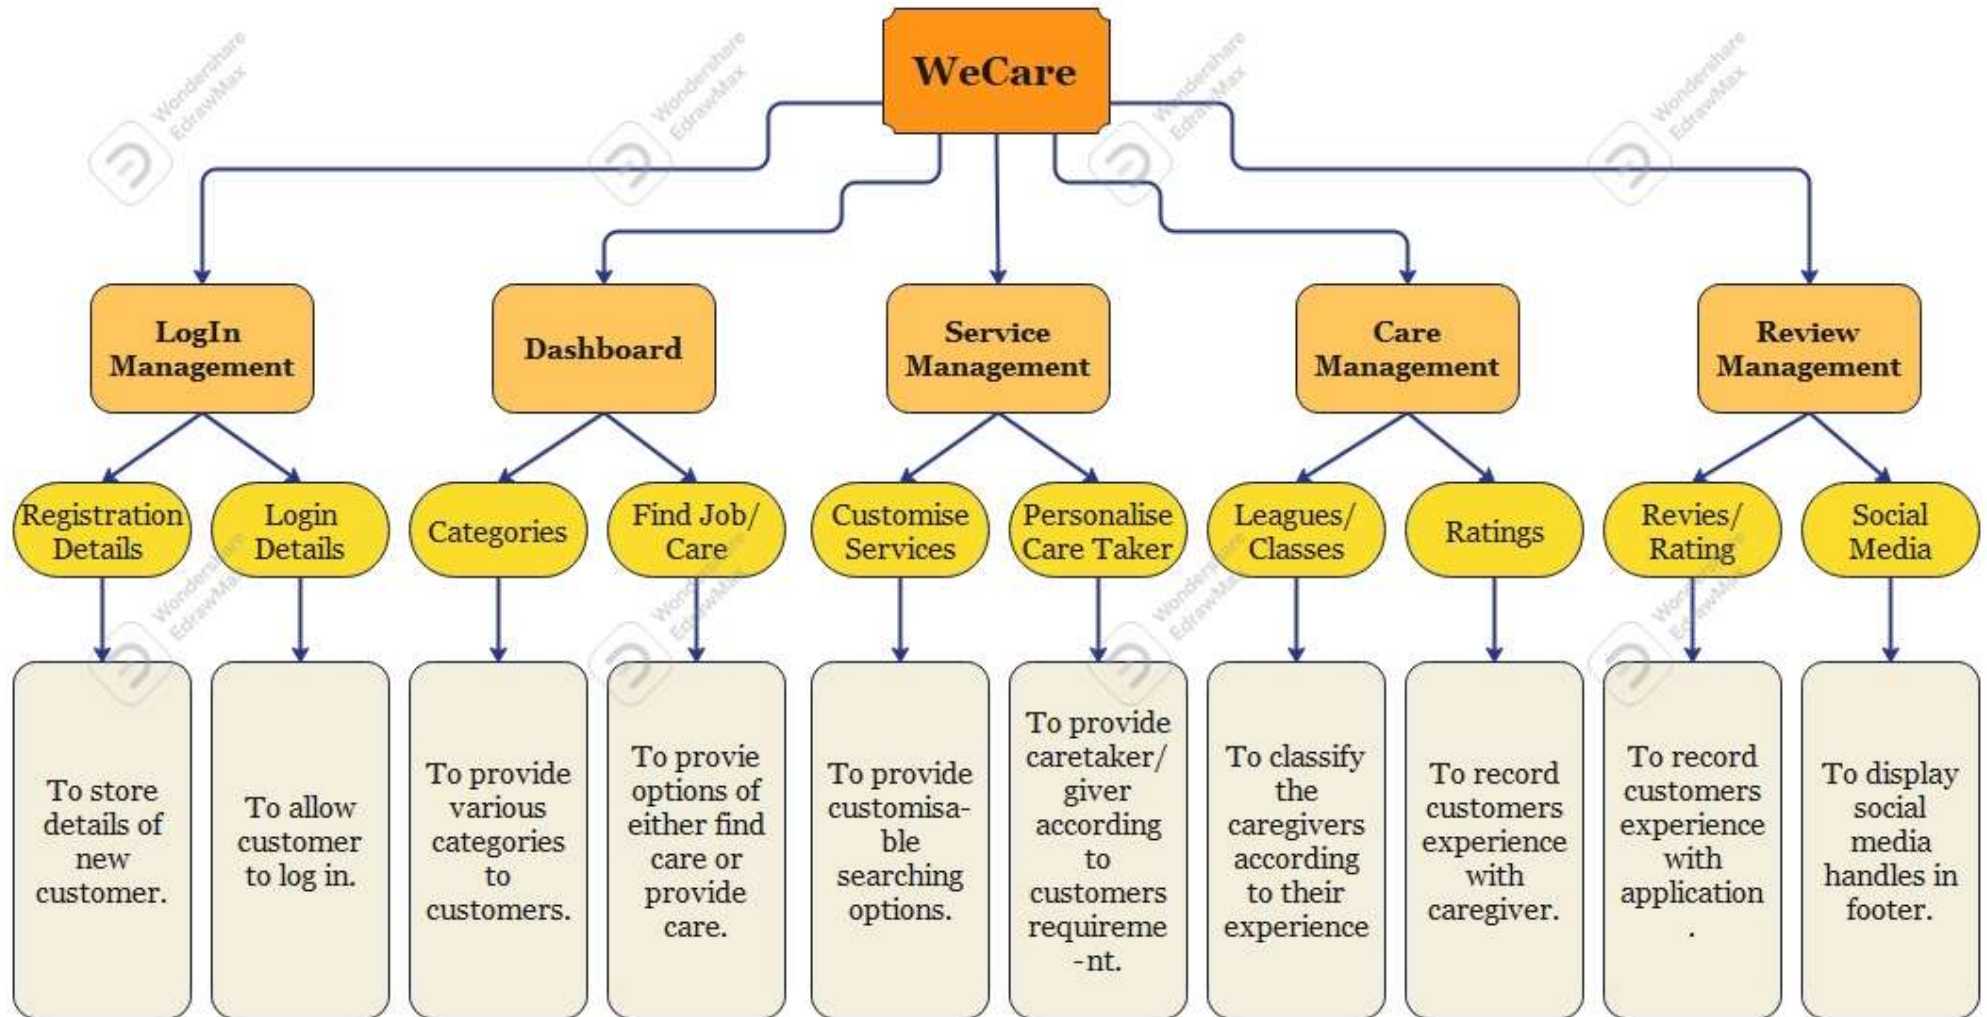

- Customer can find the nearest available service person in their locality to avail the service nearest to them.

## 6. Outcome of Project

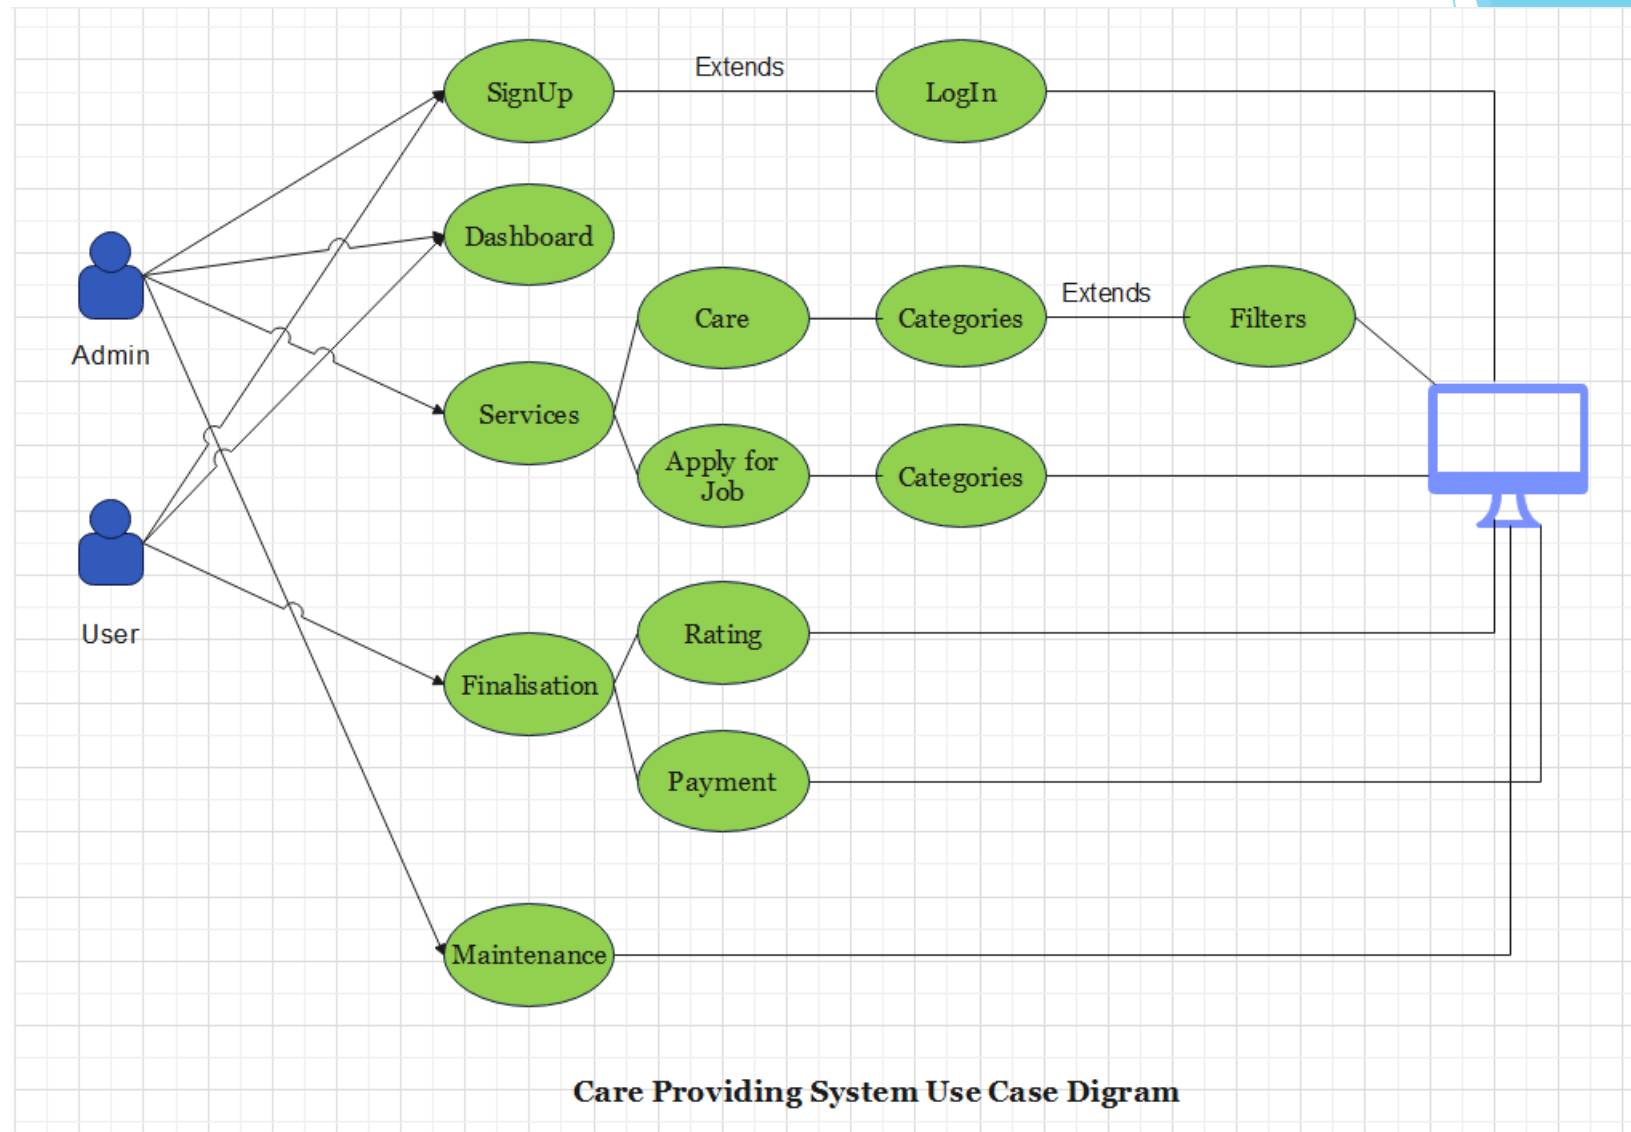

1. Innovation to solve one of the greatest human challenges.
2. Users can search for options available.
3. Users can get personalized services.
4. Clients can book appointments from anywhere.
5. Our application is responsive.

# 7. Block Diagram

# 8. Use Case Diagram

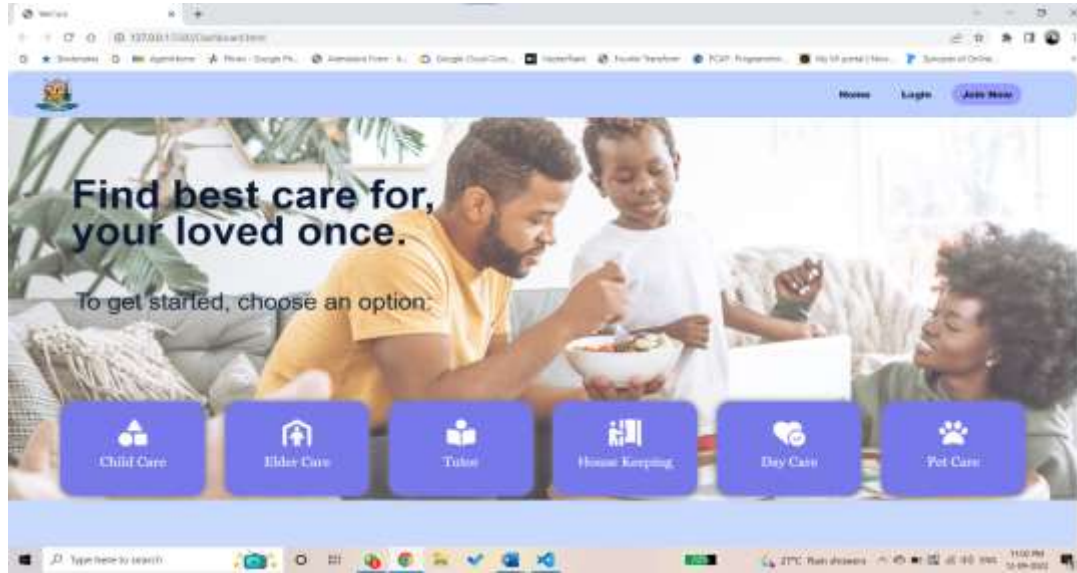

# 9. Technology Stack

1. **Front-end:** HTML,CSS,JS
2. **Database:** Firebase
3. **Integrated Development Environment (IDE):**VS code
4. **Platform:** Windows 10/11

# 10. Suggestions In Review 1

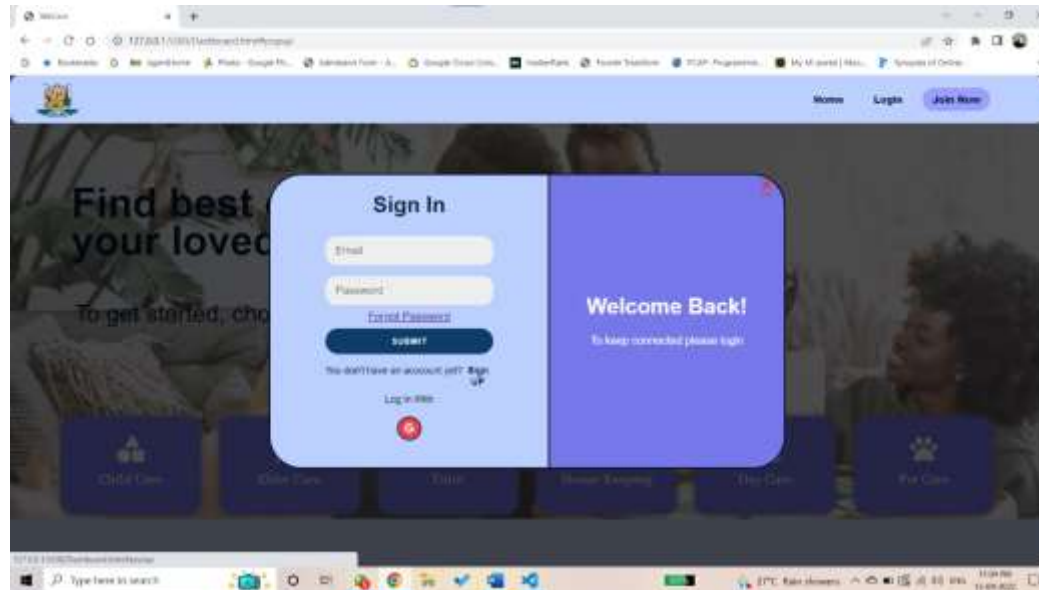

1. Google Translate API.
2. Identity proof in applying for job form.
3. Proper formatting of caregiver's information cards.
4. Conformation mail/sms to the user and caregivers.
5. Trial period feature in book caregiver section.

## 11. Result and Discussion

**Dashboard:** All the important information and functions are displayed on this page.

# 11. Result and Discussion

**Login Page:** The user can register and log in by using this page.

## 12. Conclusion and future scope

### **Conclusion:**

Thus, care providing website will provide a user-friendly and easy interface to operate. Users can find caregivers of their choice. Users can select from various types of categories such as child care, elder care, etc. Users are able to translate the content of the website according to their preferences. Hence WeCare is a very helpful website for those who need care for their loved ones.

## **12. Conclusion and future scope**(continued)

### **Future Scope:**

1. We aim to make the website more user-friendly and attractive.
2. To reach a greater number of users and caregivers.
3. To provide user-specific customization based on their preferences.
4. We aim to provide more customization options according to the user's needs.
